Software developer with 6 years of experience developing and optimizing applications, working primarily with TypeScript and JavaScript. Experience in remote startups and cross-functional teams, focused on creating scalable solutions, modernizing existing systems, and driving product growth through technology.

Skills

Frontend: HTML5, CSS3, ReactJS, React Native, NextJS, TypeScript, JavaScript, Chakra UI, Tailwind CSS, MUI, Chart UI, Shadcn/UI, Storybook, UI/UX, LLM and SSE Integrations
Backend: Node.js, NestJS, Express.js, Prisma ORM, REST APIs, gRPC, RabbitMQ
Testing & Quality: Jest, Cypress, Playwright
Databases: NoSQL, PostgreSQL, MySQL, MongoDB, Redis
DevOps: Docker, Git, GitHub Actions, AWS, Azure DevOps, CI/CD
Other: Cloud, Python, IoT (ESP32, Arduino), C++, AI/LLMs, Agile/Scrum, Remote-First

Professional Experience

Frontend Developer - EADSKILL (Mai/2025 - Set/2026)

- Work on the development and evolution of a multi-tenant SaaS platform for creating AI-powered courses, contributing to the transformation of an initial, limited MVP into an interactive and extensible multimedia content authoring platform.
- Identified limitations in the existing data structure that restricted product evolution and participated in defining a new content modeling approach, creating a more flexible foundation to support different types of components and learning experiences.
- Developed a Proof of Concept (POC) to validate the new architectural approach, later incorporated into the MVP codebase and used to enable the evolution of the course editor.
- Developed course creation experiences using AI, user-provided files and knowledge bases, as well as workflows for creating blank courses and editing them manually.
- Built the content authoring and editing experience, including interactive components, multimedia content, AI image generation, element reorganization, course publishing, and customization of content structure.
- Implemented course distribution and integration features, including SCORM export for corporate LMS platforms and PDF export.
- Developed real-time functionality in a SaaS environment, including simultaneous course editing, chat with streaming responses, and publishing scenarios that allowed authors to edit content while it was being accessed by students.
- Contributed to the evolution of UI/UX and product workflows, participating in interface and experience decisions beyond the technical implementation.
- Participated in the design and development of a second team management SaaS, with features related to organizational hierarchy, roles, and positions.
- Translated prototypes created with Lovable and Figma into production-ready interfaces using React and Next.js, turning design concepts into functional product features.

Full Stack Developer - Solutuion4Fleet (Jan/2023 - Jul/2025)

- Worked as a Full Stack Developer on the evolution of Solution4Fleet's digital solutions, focusing on franchise operations, white-label solutions, and the corporate website.
- Led the migration of the front end of the application used by franchise operations from PHP/Laravel to React and Next.js, modernizing the application and preparing its foundation for further evolution.
- Developed white-label solutions, adapting applications and experiences for different franchises and partners.
- Enhanced vehicle management with a dynamic catalog, multiple images, filters, and manageable content.
- Implemented lead capture and management workflows, including integration with an internal CRM and making information available for tracking by franchise representatives.
- Maintained the API and developed new Node.js/NestJS endpoints to support feature evolution.
- Optimized the performance and SEO of Solution4Fleet's corporate website in WordPress, working across different technical aspects to improve performance and quality metrics.
- Temporarily led a Frontend squad, mentoring two developers and contributing to technical decisions and delivery planning.

Full Stack Developer - Vai Bem (Mai/2021 - Out/2022)

- Developed APIs and microservices to support applications and business needs.
- Created websites and new pages for the company's main website.
- Developed a shopping cart, including business logic, the purchasing flow, REST API integration, and payment methods.
- Developed Python routines for data cleaning and processing using Pandas and NumPy.
- Integrated with RD Station and created automations for lead processing and email and SMS delivery.

Education

Postgraduate Degree in Software Engineering - (2025)

Bachelor's Degree in Computer Science - (2020 - 2024)

Languages

Portuguese - Native

English - Upper-Intermediate
